

## GREEN AGENDA

### PAC Qarn Alam implements pilot recycling program

Renaissance PAC Qarn Alam has implemented a pilot program to recycle plastic water bottles, also known as PET (PoleyEthylene Therephthalate) bottles, which it aims to extend to other PACs once sustainable.

In association with the Tanuf recycling initiative which picks up the bottles and delivers them to a PET recycling facility in Fujairah, the PAC residents and staff have been chucking their bottles into a large drop off bin on site, as well as catching awareness posters which list the many benefits of recycling.

Typical CSG operations can produce a large amount of waste due to its size of scale, such as providing meals for over 2,000 people at a time, which is why the CSG management chain ensures best HSE practices for every operation including all types of waste disposal. Recycling plastic bottles is a welcome addition in its effort to contribute to a cleaner and greener world.
