# Carbon Monoxide

Often called the invisible killer, carbon monoxide is an odourless, colourless gas created when fuels (such as gasoline, wood, coal, natural gas, propane, oil, and methane) burn incompletely. In the home, heating and cooking equipment that burn fuel can be sources of carbon monoxide.

Tips on how to keep yourself and others around you safe:

- Don't use a grill, generator or camping stove inside your home, garage or near a window.
- If you need to warm a vehicle, remove it from the garage immediately after starting it. Don't leave a car, SUV or motorcycle engine running inside a garage, even if the doors are open.
- Never use your oven or stovetop to heat your home or leave it unattended.
